(57) Abstract :  
 IMPLEMENTATION OF ARTIFICIAL INTELLIGENCE BASED TECHNIQUE INTEGRATED WITH MACHINE LEARNING IN ASSET MANAGEMENT The transceiver is configured to receive the beacon signal from a beacon device of the plurality of beacon devices, the processor is configured to create a data packet. The data packet includes the beacon id of the received beacon signal and the asset information of the asset tag, wherein the second transceiver is configured to wirelessly transmit the data packet to a hub. Querying the asset attributes and the asset equity using the first asset digital certificate. A computer hardware system including an asset management system configured to validate a movement of an asset having an attached radio frequency identification tag. Management instructions sent to one or more of the plurality of consumer device assets a unique identifier of the particular receiving consumer device asset. Transmitting, using a transceiver of the user device and directed to an asset management engine, the asset identifier, and the geographic location information. The process control asset management system application is a user interface update message to a plurality of process control asset management.
