Report on National Filaria Control Program By NSS Unit

Of Shri Shivaji Science College, Nagpur

Date:- 18th August 2023

In the prevalence and incidence of filariasis: One of the primary goals of any filaria control program is to reduce the number of people infected with the disease. A successful program should be able to achieve a significant reduction in both the prevalence. The success of a filariasis control program can be measured in different ways, depending on the goals and objectives of the program. However, some key indicators of success for a filariasis control program are:

1. Reduction and incidence of filariasis in the target population.
2. Improvement in the quality of life of affected individuals: Filariasis can cause significant disability, which can impact the quality of life of affected individuals. A successful control program should aim to reduce the burden of filariasis-related disability and improve the overall health and well-being of affected individuals.
3. Sustainability of the program: A successful filariasis control program should be sustainable over the long-term. This means that it should be able to continue providing effective interventions to the target population, even after the initial funding and support for the program have ended.
4. The program was conducted in presence of Principle Prof. M.P.Dhore and N.S.S Program Officer P.S.Utale by Nagpur Municipal Corporation and Shri Shivaji Science College.
5. Prof.B.T Khumbhare Dr. S.V. Khangar, Dr.S.R Gedam, Dr.R.P Sonwalkar and all the teaching, non-teaching staff, students and N.S.S Volunteers.

[Prof. P. S. Utale]
