

Shri Shivaji Education Society, Amravati's Science College

Congress Nagar, Nagpur-12 (M.S.), India

Accredited with CGPA of 3.51 at 8A+9 grade by NAAC, Bangalore A <College with Potential for Excellence= identified by UGC New Delhi. Institutional Member of APQN Recognized Centre for Higher Learning and Research Mentor College under 8PARAMARSH Scheme9, UGC, New Delhi

SSES Amravati's Science College, Congress Nagar, Nagpur-12

DEPARTMENT OF PHYSICS

Session 2022-2023

Course Title: Certificate Course on Dobsonian Telescope Design, Construction and Use

Duration – 30 Hours (10 Weeks)

Course Start from 16 Aug 2022 to 22 Oct. 2022

Course Coordinator: Dr. S. V. Khangar

Shri Shivaji Education Society Amaravati's Science College Congress Nagar, Nagpur Department of Physics

Course Report on Add-on Course

"Certificate Course on Dobsonian Telescope: Design, Construction and Use"

Undergraduate Course for Physics Students

Duration: 16/08/2022 to 22/10/2022

Total Students: 80

This 10-week add-on course provided B.Sc. Physics students with a comprehensive understanding of the Dobsonian Telescope, its design, construction and use. The course was conducted by Dr. S. V. Khangar, Assistant Professor, Department of Physics SSES Amt's Science College Congress Nagar Nagpur. Total 80 Students of B.Sc. I, II and III, year Physics were enrolled for the course.

The course covered design principles, construction techniques, and practical use for amateur astronomy emphasizing hands-on experience and real-world applications. This course also provide a comprehensive learning experience in Dobsonian telescope from design and construction and practical observational techniques to UG students. The students were evaluated through MCQ based final exam of 60 marks and practical lab sessions and hands on sessions of 40 marks. All 80 students successfully completed the course, with a majority achieving high grades. Several students demonstrated exceptional skills in practical applications and their innovative ideas during hands on experience. Students worked on individual and group projects that involved designing and construction of Dobsonian telescope & practical observational techniques.

The 10-week Certificate Course on Dobsonian Telescope: Design, Construction and Use was a valuable addition to the undergraduate physics curriculum, equipping students with essential knowledge and skills in designing and construction of Dobsonian telescope & practical observational techniques. The course successfully combined theoretical knowledge with hands-on experiences, students gained the skills and confidence to use Dobsonian telescopes for exploring the wonders of the night

Waring or Course coordinator

To, The Principal SSES Amt's Science College, Congress Nagar, Nagpur-12

Subject: Permission to conduct the add on courses in the Physics department (2022-2023)

Respected Sir,

This is to request you that, we wish to conduct the add on courses in Physics department these are the certificate courses of thirty hours' time duration.

The details of the courses are submitted here with.

Hence please permit to run the same and oblige me.

Thanking you

2/07/2022

Yours sincerely

Dr. S. W. Anwane Professor and Head Department of Physics Shri Shivaji Education Society Amravati's SCIENCE COLLEGE Congress Nagar, Nagpur.

Pervited power

Shri Shivaji Education Society Amravati's

Science College Congress Nagar, Nagpur

Department of Physics

Add-on Certificate Course (2022-2023)

Certificate Course: Dobsonian Telescope: Design, Construction and Use

0

NOTICE (For UG)

Date:1/08/2022

All the B Sc. First year, Second Year and Final Year students of the department of Physics are hereby informed that the Physics Department commencing a certificate course on "Dobsonian Telescope: Design, Construction and Use" from 16/08/2022 to 22/10/2022. For this course registration will start from 06/08/2022 to 14/08/2022. Interested students contact to course coordinator for registration.

Note: registration is free

Department of Physics

Add-on Certificate Course (2022-2023)

Certificate Course: Dobsonian Telescope: Design, Construction and Use

0

Date: 12/08/2022

NOTICE (For UG)

All the registered students of the department of Physics are hereby informed that the Physics department commencing a certificate course on "Dobsonian Telescope: Design, Construction and Use" from 16/08/2022 to 22/10/2022. The registered students are requested to do the regular classes and practical as per the scheduled timetable. For any query contact to course coordinator

Course coordinator: Dr. Sugandha V. Khangar Contact Number: 9975768840

SSES AMT'S SCIENCE COLLEGE, CONGRESS NAGAR, NAGPUR-12 (Certificate Course on Dobsonian Telescope: Design, Construction and Use)

Time Table

Day	Theory	Room No
Friday	SVK (C4) Theory 4.00 PM - 5.00 PM	C6
Saturday	SKS (C4) Theory, 4.00 PM - 5.00 PM	C6
	SVK and whole staff practical, 6:30 PM - 7:30 PM	C-Block open Terrace

Course coordinator

Dr. Sugandha V. Khangar

Session 2022-2023

	field -	Free Certificate Course for College Students
		Duration: 30 Hours (10 Weeks) (From 16/08/2022 to 22/10/2022)
		Frequency: Weekly sessions (2-3 hours each) including field trips and observational sessions
		Process of Registration: Early birds
		will be admitted first.
		Registration Date: 06/08/2022 to 14/08/2022 Exam Date: 25/10/2022
	Course Objectives:	Course Overview:
	1) Understanding Dobsonian Telescope Basics	This certificate course provides participants with a comprehensive
	2) Optical and Mechanical Components	understanding of Dobsonian telescopes covering their design principles
	3) Design and Construction Skills	construction techniques, and practica use for amateur astronomy. This course
	4) Collimation and Maintenance	also offers participants a comprehensive
	5) Observational Techniques	telescope technology, from design and construction to practical observationa
	6) Advanced Topics	techniques. By combining theoretica knowledge with hands-on experiences
1	7) Safety and Ethics	confidence to build, maintain and us
	Q	Dobsonian telescopes for exploring the wonders of the night sky.

DEPARTMENT OF PHYSICS

COURSE MODULE AND SYLLABUS

Course Title:

Certificate Course on Dobsonian Telescope: Design, Construction and Use

Course Coordinator: Dr. Sugandha V. Khangar

Course modules:

Course Modules:

1. Introduction to Dobsonian Telescopes

- History and evolution of the Dobsonian telescope
- Advantages and disadvantages compared to other telescope designs
- Importance of the Dobsonian mount in achieving stability and ease of use

2. Optics and Mechanics of Dobsonian Telescopes

- Optical components: primary and secondary mirrors, focuser, and eyepiece
- Optical design considerations: aperture, focal length, and focal ratio
- Mechanical structure: truss tube or solid tube, materials, and weight distribution

3. Design and Construction of Dobsonian Telescopes

- Planning and designing a Dobsonian telescope: choosing the right specifications
- Construction materials and tools required for building the telescope
- Step-by-step assembly instructions for building a basic Dobsonian telescope

4. Collimation and Maintenance

• Understanding collimation: aligning the optics for optimal performance

- Tools and techniques for collimating a Dobsonian telescope
- Routine maintenance to keep the telescope in good condition

5. Observing Techniques and Sky Navigation

- Introduction to observational astronomy: stars, planets, nebulae, and galaxies
- Sky navigation techniques: using star charts, digital apps, and celestial coordinates
- Tips for observing different celestial objects with a Dobsonian telescope

6. Advanced Topics in Dobsonian Telescopes

- Upgrading and customizing a basic Dobsonian telescope
- Astrophotography with a Dobsonian telescope: techniques and challenges
- Remote observing and digital control systems for Dobsonian telescopes

7. Field Trips and Observational Sessions

- Hands-on field trips to observe the night sky with Dobsonian telescopes
- Practical sessions on setting up and using Dobsonian telescopes in various observing conditions
- Guided observations of celestial objects and phenomena

8. Safety and Ethics in Amateur Astronomy

- Safety considerations when observing the night sky: eye protection, equipment handling, and site selection
- Ethics of amateur astronomy: light pollution awareness, environmental impact, and responsible observing practices

Course Objectives:

- 1. Understanding Dobsonian Telescope Basics:
 - Gain a comprehensive understanding of the history, design principles, and advantages of Dobsonian telescopes compared to other telescope designs.
- 2. Optical and Mechanical Components:

• Learn about the optical components (primary and secondary mirrors, focuser, eyepiece) and mechanical structure (truss tube or solid tube) of Dobsonian telescopes.

3. **Design and Construction Skills**:

• Acquire the knowledge and skills necessary to plan, design, and construct a Dobsonian telescope, including selecting appropriate specifications and materials.

4. Collimation and Maintenance:

- Understand the importance of collimation for optimal telescope performance and learn how to collimate a Dobsonian telescope effectively.
- Learn routine maintenance procedures to keep the telescope in good working condition.

5. **Observational Techniques**:

- Develop observational skills and techniques for navigating the night sky using star charts, digital apps, and celestial coordinates.
- Learn how to observe various celestial objects, including stars, planets, nebulae, and galaxies, with a Dobsonian telescope.

6. Advanced Topics:

• Explore advanced topics such as upgrading and customizing Dobsonian telescopes, astrophotography techniques, and remote observing options.

7. Safety and Ethics:

- Understand safety considerations when observing the night sky, including eye protection and equipment handling.
- Learn about the ethical aspects of amateur astronomy, including light pollution awareness and responsible observing practices.

Instructional Strategies: Theory class, Practical, Video clips, Model etc.

Evaluation Strategies: Oral discussions and Final MCQ examination.

Course Outcomes (COs):

1. Comprehensive Understanding of Dobsonian Telescopes:

• Participants will have a thorough understanding of Dobsonian telescope technology, including its optical and mechanical components, design principles, and historical significance.

2. Proficiency in Telescope Design and Construction:

• Participants will gain practical skills in planning, designing, and constructing a Dobsonian telescope, enabling them to build their own telescopes or make informed decisions when purchasing one.

3. Effective Observational Skills:

• Participants will develop effective observational skills and techniques for navigating the night sky and observing various celestial objects with a Dobsonian telescope.

4. Ability to Maintain and Collimate Telescopes:

• Participants will be able to perform routine maintenance procedures and collimation on Dobsonian telescopes to ensure optimal performance.

5. Exploration of Advanced Topics:

- Participants will explore advanced topics in Dobsonian telescope technology, such as upgrades, astrophotography, and remote observing, expanding their knowledge and capabilities in amateur astronomy.
- 6. Adherence to Safety and Ethical Standards:
 - Participants will understand and adhere to safety protocols when observing the night sky and demonstrate ethical behavior in their amateur astronomy activities.

Duration of course: Ten weeks (30 Hours)

Target Audience:

- UG students those who are interested in building and using telescope
- Astronomy enthusiasts looking to deepen their understanding of Dobsonian telescope technology and observational techniques.

Prerequisite

- Basic knowledge of astronomy and telescopes
- observational ideas

Certification:

Participants who successfully complete the course requirements, including attendance, MCO type exam, and a final observational events (practical exam), will receive a certificate of completion in Dobsonian telescope design, construction, and use.

Course	Theory Papers and Practical	Total Marks	
Certificate Course on Dobsonian Telescope: Design, Construction and	Theory paper- Certificate Course on Dobsonian Telescope: Design, Construction and Use: Theory examination will be of MCQ pattern having 60 questions each with equal marks.	60	Phylecel Practical 40
Use	 Practical examination will be based on performance sky observation (hands on) 	10	0

SYLLABUS

Certificate course (10 weeks) (Certificate Course on Dobsonian Telescope: Design, Construction and Use)

Theory

Unit III

UNIT-1

Introduction to Dobsonian Telescopes: History and evolution of the Dobsonian telescope, Advantages and disadvantages compared to other telescope designs, Importance of the Dobsonian mount in achieving stability and ease of use

Optics and Mechanics of Dobsonian Telescopes: Optical components: primary and secondary mirrors, focuser, and eyepiece, Optical design considerations: aperture, focal length, and focal ratio, Mechanical structure: truss tube or solid tube, materials, and weight distribution

Unit-II

Design and Construction of Dobsonian Telescopes: Planning and designing a Dobsonian telescope: choosing the right specifications, Construction materials and tools required for building the telescope, Step-by-step assembly instructions for building a basic Dobsonian telescope. Collimation and Maintenance: Understanding collimation: aligning the optics for optimal performance, Tools and techniques for collimating a Dobsonian telescope, Routine maintenance to keep the telescope in good condition. Observing Techniques and Sky Navigation: Introduction to observational astronomy: stars, planets, nebulae, and galaxies, Sky navigation techniques: using star charts. digital apps, and celestial coordinates, Tips for observing different celestial objects with a Dobsonian telescope

AdvancedTopicsinDobsonianTelescopes:Upgrading and customizing abasicDobsoniantelescope,Astrophotographywith aDobsoniantelescope:techniquesandchallenges,Remote observing and digital control systemsfor Dobsonian telescopes

Unit IV:

Field Trips and Observational Sessions: Hands-on field trips to observe the night sky with Dobsonian telescopes, Practical sessions on setting up and using Dobsonian telescopes in various observing conditions, Guided observations of celestial objects and phenomena.

Safety and Ethics in Amateur Astronomy: Safety considerations when observing the night sky: eye protection, equipment handling, and site selection, Ethics of amateur astronomy: light pollution awareness, environmental impact, and responsible observing practices

Practical / Project Work and Assessment

- Hands-on practical work on sky observing events and their attendance
- Attendance

Distribution of marks: -

1. Hands on practical work -	30 M
2. Attendance -	10 M

Week-wise teaching plan

Week	Hrs.	Syllabus
Week 1	3	History and evolution of the Dobsonian telescope, Advantages and disadvantages compared to other telescope designs
		Importance of the Dobsonian mount in achieving stability and ease of use
		Practical on observatory field visit
Week 2	3	Optical components: primary and secondary mirrors, focuser, and eyepiece, Optical design considerations: aperture, focal length, and focal ratio, Mechanical structure: truss tube or solid tube, materials, and weight distribution
		Practical on setting Dobsonian telescope
Week 3	3	Planning and designing a Dobsonian telescope: choosing the right specifications, Construction materials and tools required for building the telescope, Step-by-step assembly instructions for building a basic Dobsonian telescope.
Week 4	3	Understanding collimation: aligning the optics for optimal performance, Tools and techniques for collimating a Dobsonian telescope, Routine maintenance to keep the telescope in good condition. Practical sky observation and group discussion
Week 5	3	Introduction to observational astronomy: stars, planets, nebulae, and galaxies, Sky navigation techniques: using star charts, digital apps, and

		celestial coordinates, Tips for observing different celestial objects with a
		Dobsonian telescope
		Practical sky observation and group dicussion
Week 6	3	
		Upgrading and customizing a basic Dobsonian telescope, Astrophotography with a Dobsonian telescope: techniques and challenges, Remote observing and digital control systems for Dobsonian telescopes Practical: sky observation and Group discussion
Week 7	3	Hands-on field trips to observe the night sky with Dobsonian telescopes, Practical sessions on setting up and using Dobsonian telescopes in various
		observing conditions, Guided observations of celestial objects and phenomena.
		Practical: sky observation and Group discussion
Week 8	3	
WEEK 0	5	Safety considerations when observing the night sky: eye protection, equipment handling, and site selection, Ethics of amateur astronomy: light pollution awareness, environmental impact, and responsible observing practices.
		Practical: sky observation and Group discussion
Week 9	3	
week 9	5	Safety considerations when observing the night sky: eye protection, equipment handling, and site selection, Ethics of amateur astronomy: light pollution awareness, environmental impact, and responsible observing practices
TTT T T T T T T T T	2	
Week 10	3	Question answer solving session & Practical Group discussion

Congress Nagar, Nagpur

Department of Physics

Add-on Certificate Course (2022-2023)

Certificate Course: Dobsonian Telescope: Design, Construction and Use

NOTICE (For UG)

Date: 21/10/2022

All the registered students for certificate course on "Dobsonian Telescope: Design, Construction and Use" are hereby informed that their Final exam is held on 25/10/2022 at 11: 00 am sharp.

Note: Question paper will be of 60 Marks Time for this paper is 1 hour Each question carry 2 Marks For any query contact to course coordinator.

Room No. Co

Course coordinator: Dr. Sugandha V. Khangar Contact Number: 9975768840

Course Coordinator Dr. S. V. Khangar

Shri Shivaji Education Society Amaravati's Science College Congress Nagar, Nagpur Department of Physics

Add-on Certificate Course on Dobsonian Telescope: Design, Construction and Use

THEORY EXAM

Date: 25/10/2022	
Max. Marks: 60	

Max. Time: 1 Hour Marks Obtained:

Student Name: -----

Note: i) All questions are compulsoryii) Each question carries two marksiii) Tick the correct option

1. What is the primary feature that distinguishes a Dobsonian telescope from other designs? A) Computerized tracking

B) Lightweight materials

C) Altitude-azimuth mount

D) Refractor optics

2. What is the approximate focal ratio typically associated with a Dobsonian telescope?

A) f/5 to f/8

B) f/15 to f/20

C) f/2 to f/3

D) f/10 to f/12

3. Which component of a Dobsonian telescope is responsible for supporting the primary mirror?

A) Equatorial mount

B) Altitude bearing

C) Spider vane

- D) Dobsonian base
- 4. What is the purpose of a Dobsonian telescope's "rocker box"?
- A) To house the eyepiece
- B) To provide a stable platform for the telescope
- C) To control the telescope's tracking
- D) To support the secondary mirror
- 5. Which of the following is a benefit of a Dobsonian telescope's simplicity in design?
- A) Greater portability
- B) Higher magnification
- C) Improved resolution
- D) Automated alignment
- 6. What is the main disadvantage of Dobsonian telescopes compared to other designs?
- A) Limited aperture
- B) Heavy weight
- C) Complexity of use
- D) Limited field of view
- 7. What type of mirror is typically used as the primary mirror in a Dobsonian telescope?
- A) Convex mirror
- B) Parabolic mirror
- C) Spherical mirror
- D) Concave mirror

8. Which adjustment allows the user to point the Dobsonian telescope at different objects in the sky?

A) Collimation

- B) Focuser
- C) Altitude adjustment
- D) Eyepiece rotation
- 9. What is the function of the "finder scope" on a Dobsonian telescope?
- A) To magnify the image for detailed viewing
- B) To provide a wide field of view
- C) To assist in locating celestial objects
- D) To stabilize the telescope during observation

10. Which of the following accessories is commonly used with a Dobsonian telescope for astrophotography?

- A) Equatorial wedge
- B) Autoguider
- C) Barlow lens
- D) Star diagonal
- 11. What is a defining characteristic of a Dobsonian telescope?
- A) Equatorial mount
- B) Alt-azimuth mount
- C) Refractor design
- D) Catadioptric design
- 12. Which of the following is an advantage of Dobsonian telescopes?
- A) High portability
- B) Suitable for astrophotography
- C) Expensive to build

- D) Large aperture
- 13. What is the primary function of the focuser in a Dobsonian telescope?
- A) Collecting light
- B) Adjusting magnification
- C) Supporting the primary mirror
- D) Mounting the eyepiece
- 14. Which material is commonly used for the primary mirror of a Dobsonian telescope?
- A) Aluminum
- B) Plastic
- C) Glass
- D) Copper
- 15. What is the purpose of collimation in a Dobsonian telescope?
- A) Focusing the telescope
- B) Aligning the optics
- C) Balancing the mount
- D) Adjusting the eyepiece
- 16. How can you align the finder scope with the main optics in a Dobsonian telescope?
- A) Using a laser pointer
- B) Aligning it with a bright star
- C) Adjusting the focuser
- D) Using a compass

17. What is the recommended technique for observing celestial objects with a Dobsonian telescope?

A) High magnification for faint objects

- B) Low magnification for wide-field views
- C) Observing during daylight hours
- D) Using a small aperture
- 18. Which of the following can be observed using a Dobsonian telescope?
- A) Microorganisms
- B) Deep-sky objects
- C) Subatomic particles
- D) Radio waves
- 19. What role do Dobsonian telescopes play in amateur astronomy?
- A) Observing satellites
- B) Conducting space missions
- C) Public outreach and education
- D) Discovering exoplanets
- 20.What type of celestial objects can be observed using a Dobsonian telescope?
- A) Only planets B) Only stars C) Only galaxies D) Planets, stars, galaxies, and nebulae
- 21. Which celestial object is best observed with high magnification?
- A) Galaxies B) Planets C) Stars D) Nebulae

22. What is the recommended technique for finding celestial objects in the sky with a Dobsonian telescope?

A) Using a compass B) Observing during daylight hours C) Star-hopping D) Using a laser pointer

23. How should you adjust the focus when observing celestial objects with a Dobsonian telescope?

- A) Quickly switch between high and low magnification
- B) Slowly adjust the focus until the object appears sharp

- C) Use only the highest magnification available
- D) Keep the focus fixed at all times
- 24. What is the effect of light pollution on sky observation with a Dobsonian telescope?
- A) Improves visibility of faint objects
- B) Reduces visibility of faint objects
- C) Has no effect on visibility
- D) Enhances contrast of celestial objects
- 25. When is the best time for sky observation with a Dobsonian telescope?
- A) During a full moon
- B) During daylight hours
- C) On clear, moonless nights
- D) During heavy rain or snowfall
- 26. What is the purpose of collimation in a Dobsonian telescope?

A) Adjusting the focus B) Aligning the optics C) Balancing the telescope D) Cleaning the mirrors

- 27. How should you store a Dobsonian telescope when not in use?
- A) Leave it outdoors exposed to the elements
- B) Store it in a damp environment
- C) Cover it with a dust cap and store it indoors
- D) Disassemble it and store the parts separately
- 28. What effect does light pollution have on sky observation with a Dobsonian telescope?
- A) Improves visibility of faint objects
- B) Reduces visibility of faint objects
- C) Has no effect on visibility

D) Enhances contrast of celestial objects

29. Which type of sky conditions is most conducive for observing celestial objects with minimal interference from light pollution?

- A) Urban skies B) Suburban skies C) Rural skies D) Industrial skies
- 30. What is the primary impact of atmospheric turbulence on sky observation?
- A) Increased clarity of celestial objects
- B) Decreased visibility of celestial objects
- C) Improved contrast of celestial objects
- D) Enhanced color saturation of celestial objects
