

Seminar  
on  
**Edge Computing**

Presented by

**Mansi S Hingle**

M.Sc. (Computer Science) Semester-II

**DEPARTMENT OF COMPUTER SCIENCE**

Shri Shivaji Education society Amravati's

**SCIENCE COLLEGE**

Congress Nagar, Nagpur-440012

# Contents:

- Introduction
- Objectives
- Features
- Working
- Advantages
- Disadvantages
- Conclusion
- Future scope
- References

**EDGE**

**COMPUTING**

# You need to move from Cloud computing to Edge computing!

- Cloud computing is the on-demand availability of computer system resources, especially data storage and computing power, without direct active management by the user.

- To leverage 5G wireless technology and artificial intelligence to enable faster response time, lower latency(ability to produce high volumes of data with minimal delay), and simplified maintenance in computing.

Google Cloud

aws

Azure

# What is Edge Computing?

- “Edge Computing is a distributed computing paradigm which brings computer data storage closer to the location where it is needed”.
- The idea is to analyze data locally, closer to where it is stored, in real-time without latency, rather than send it far away to a centralized data centre.

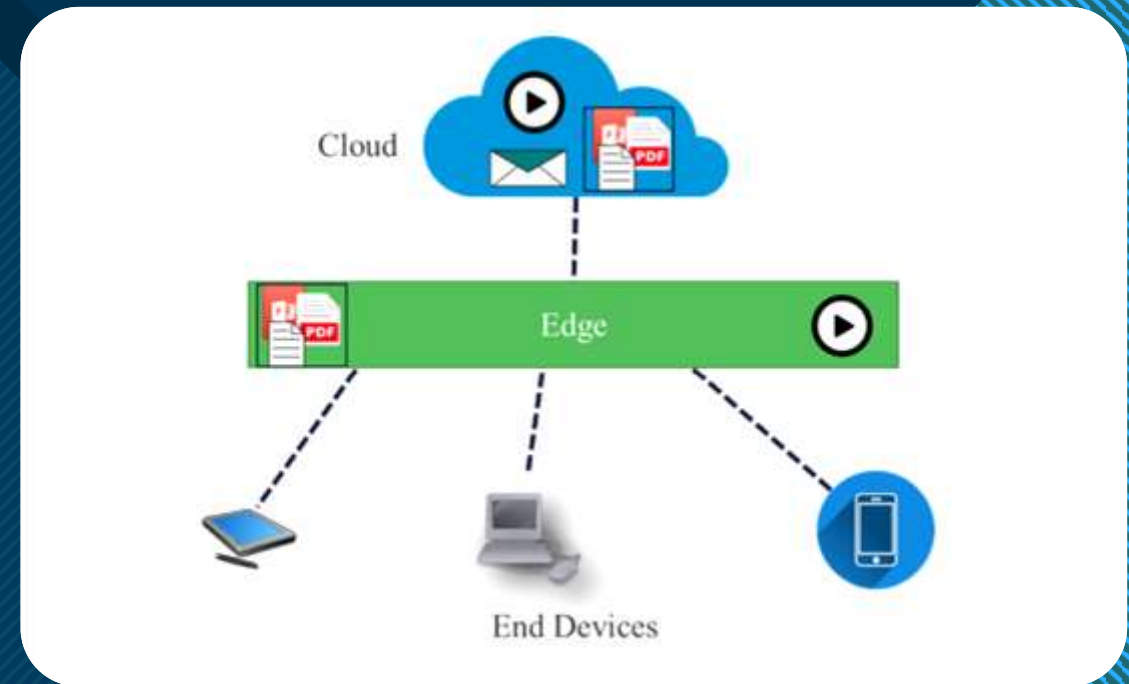

Fig: Edge Computing

# Objectives

Reduce Latency

Bandwidth Use

Spontaneous Response

More Robustness

Today

2025

Gartner.

# Features

Geographically Distributed

Low Latency

Scalable

Real-time Interactions

# Working

Fig: Three-tier edge computing model.

# Advantages

**Faster Response  
Time**

**Cost Effective  
Solutions**

**Reliable  
Operations even  
with loss of  
connectivity**

**Security**

**Rapid  
Scalability**

# Disadvantages

**Incomplete  
Data**

**More Storage  
Space**

**Security**

**Investment Cost**

**Maintenance**

# Edge Computing Use Cases

- Autonomous Vehicles
- Healthcare Devices
- Security Solutions
- Smart Speakers
- Video Conferencing

# Conclusion

Edge computing and cloud computing are different technologies and can't replace each other. It is true to say that edge technology has been accepted by many organizations due to its overcome on minor issues of cloud computing. However, it is not substantiated as it is not the only solution to the obstacles faced by the IT vendors.

# Future Scope

Edge computing is much more than simply redistributing data to the endpoints. There is no denying that it will enable businesses to perform advanced analytics in new ways. The time when you will be able to effortlessly stream an 8K video on your mobile phone, or step into an autonomous taxi for your ride home is no longer on the edge of our imagination. We still need data centers for many other use cases that require heavy computation, and for storage. However, until the next big shift, the edge is the future.

A 3D rendered tag with the words "Thank You" in a white, bubbly font on a light blue background. The tag is suspended by a thin gold string. The background is a dark blue gradient with a diagonal line of fine, light blue lines. A faint, darker blue shadow of the tag is visible below it.

Thank  
You
